

## Adjusting the Pressure Switch

In June 2016 Yorkton Aircraft Technician Warren Klynsmith tested a Honeywell Pressure Switch to determine number of turns and equivalent pressure settings.

Bottomed out: PSI = 2

1 Turn in = 5 PSI

2 Turns in = 14 PSI

3 Turns in = 20 PSI

4 Turns in = 27 PSI

This was not an exact science - only meant to be an "indication" of likely pressure setting if someone has to do a field adjustment.
