

Introducing the iTowBot

A Remote Controlled Towing Solution

One Man Only

Remote control allows one man to tow aircraft from any vantage point, eliminating need for wing walkers. And yes, only one man needed for loading and unloading.

Eliminates Hangar Rash

The patented hybrid zero-turn capability & fully articulating carriage can safely turn aircraft a full 360°.

No Fuel, No Engine Noise

Electric with rechargeable battery, no fuel required. Near silent operation. No more hard starting like traditional towing equipment.

Works on Ice & Light Snow

Once loaded, the 4-wheel drive means seamless starts & stops to prevent skipping & slippage.

APU Option Available

Not only a towing solution but also an APU solution!

Rugged Construction

Steel. Powder coated frame. Powerful reversible 24 Volt DC motor. Trouble free cast iron rims with non-marking Moldon Wheels. Overvoltage & thermally protected.

Tows up to 50,000 lbs.

Choose your model— 15,000, 30,000 or 50,000 GW. Single nose wheel or tail dragger aircraft. Remote Range: 75 feet

Use for Other Applications

Use in place of a forklift to move props & other heavy equipment. Add trailer towing attachment & move almost any ball hitched trailer— think boats, RV's!
