

Yorkton Aircraft Service Expands Aviation Lighting Solutions Through New Relationship with Aveo Engineering

Collaboration brings additional aircraft lighting options and technical support to Canada's general and business aviation market

YORKTON, Saskatchewan — October 2026 — Yorkton Aircraft Service Ltd. (YAS) is pleased to announce a new sales and technical-support relationship with Aveo Engineering Group, expanding the range of aviation lighting products available to Canadian general and business aviation aircraft owners and operators.

Aveo Engineering develops and manufactures aviation lighting systems, including a portfolio of TSO/ETSO-approved products for a variety of aircraft applications.

The relationship supports YAS's ongoing strategy of developing complementary product dealerships and distribution partnerships that expand the range of aircraft equipment the company can supply, install, maintain and support.

"Our objective has always been to provide customers with more than just a part or a piece of equipment," said Cheryl Denesowych, Director of Operations and Business Development at Yorkton Aircraft Service. "We want to help aircraft owners identify the right products for their aircraft, understand their installation options and have access to the technical support they need after the sale."

YAS has built its business around combining aircraft maintenance, avionics, parts supply and technical expertise. The addition of Aveo's lighting products complements those existing capabilities and creates new opportunities to support aircraft owners undertaking maintenance, avionics upgrades and other aircraft improvements.

Unlike traditional parts-only distribution, YAS works directly with aircraft owners and operators through its maintenance and avionics operations in Yorkton and Regina, Saskatchewan.

"Aircraft owners often look to their maintenance provider for guidance when considering upgrades," Denesowych added. "Our technicians understand the aircraft and the practical considerations involved in installing and maintaining equipment. That puts us in a good position to introduce products that offer real value to our customers."

The relationship also reflects Aveo's interest in working with aviation specialists who can combine product knowledge with installation expertise and direct customer support.

YAS will be introducing Aveo's aviation lighting portfolio to customers across Canada, with product selection and installation eligibility assessed according to the aircraft and applicable certification requirements.
